

7/21

The Crystal Cable Scala (€999/pr.) is machined from a solid block of aluminum and is intended to optimize the high-frequency radiation pattern of a loudspeaker. In the case of the Scala that Crystal Cable's Gabi Rijnveld is shown holding, it's designed specifically for the company's Arabesque Minissimo and Arabesque Minissimo Diamond speakers. A version that will be applicable to a wider range of speakers from other manufacturers is in the works and will be available soon.
