MUNICH HIGH END 2016: CABLES AND POWER PRODUCTS

Show report

By [Jim Hannon](#) | May 30th, 2016

Crystal Cable's Gabi Rijnveld with the Next flexible earphone cable.

Crystal Cable Next

According to **Crystal Cable's** Gabi Rijnveld, high-quality cables may make an even bigger difference in personal audio than they do in stereo systems. Crystal Cable's **Next** earphone cables (\$899) use a combination of proprietary silver-gold conductors and mono-crystal copper. They are quite flexible and lightweight, and are designed to survive rough use without snapping or breaking. Here are high-performance earphone cables that sound great and make you feel like you're hardly wearing them. I half expected them to float in air! Crystal Cable Next is available exclusively through **Astell&Kern**.
